CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

2.3 SCOPE OF WORK

2.3.1 Scope of Supply or Services

Supply and install new fencing at the **Bonza Bay Beach** picnic site.

2.3.1 Scope of Supply or Services

Buffalo City Metropolitan Municipality calls for informal written price quotations for the supply, delivery and installation of a welded mesh/hinged mesh fence 1.8 metre high, specifically catering for dogs and medium range game. The purpose is to keep out hunting dogs and locals from hunting small to medium game in the reserve.

Secondly is to provide a safe environment for small to medium game in the reserve without impeding on their free-range movement in search of food and their normal grazing habitat.

.

This contract makes provision for the replacement of roughly 500m of fence 1.8m high. The tenders received will be evaluated against value for money to ensure that public funding is spent wisely. This is in terms of the Municipal Finance Act to ensure value for money to the municipality, and that the product is affordable and market related.

2.3.2 **Material Specification**

Fence Type

The welded/hinged mesh shall be equally spaced horizontal line wire hinge joint fence, designed specifically for African Game 1.8 metre high. Horizontal line wire spacing shall be 100mm high, and the vertical line wire spacing shall be 152mm apart (wide).

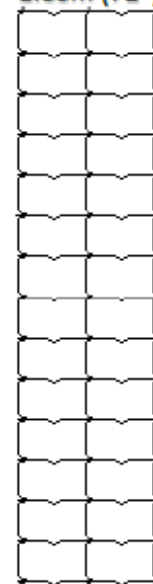

The horizontal line wire shall be not less than 2mm diameter high tensile steel with breaking strain of 415 kg. The wire shall be high grade galvanizing specifically for coastal areas. Written compliance of the corrosion protection is required.

The alternative to the special treated wire mesh is a 3.2mm diameter wire also of high-grade galvanizing specifically for coastal zone

The vertical stay wire shall be not less than 2mm diameter mild steel with breaking strain of 220 kg. The wire shall be high grade galvanizing specifically for coastal areas. Written compliance of the corrosion protection is required.

The alternative to the special treated wire mesh is a 3.2mm diameter wire also of high-grade galvanizing specifically for coastal zone.

1.83m (72")

Corner and straining posts

Corner and straining posts shall be treated timber poles with a minimum diameter of 150 mm at the thin end and comply with the requirements of SABS 457. The timber posts shall be machine turned to 150mm thickness with domed tops and CCA H4 treated. The horizontal stay shall be 75mm thick. The posts shall be planted to depth of at least 750mm in concrete 350 x 350x 750mm deep.

Intermediate Posts (Droppers)

Usually 75mm diameter posts treated CCA H4.

Bolts

Type of bolts – Galvanised M8 & M10

Site

The site shall be cleaned, levelled and all foreign material removed as well as any weeds.

2.3.3 Installation Specification

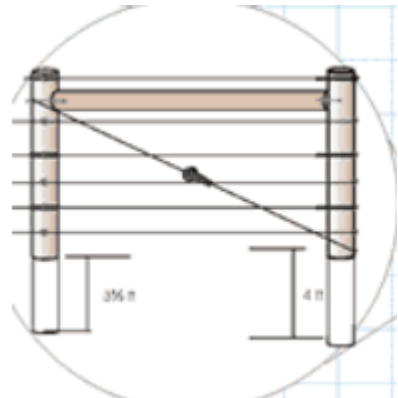

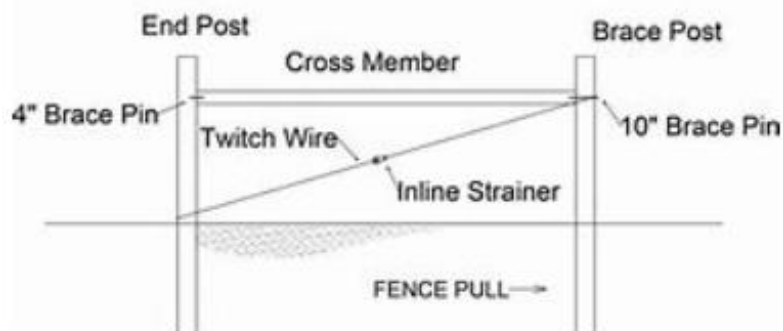

Erection of fence

Mesh fence is erected in much the same way as ordinary line wire fencing except that all the line wires are strained simultaneously with the aid of a clamp bar and two or three wire strainers.

Corner and Straining Posts

Straining posts shall be erected at all ends, corners and bends in the line of fences and at all junctions with other fences. Straining posts shall not be paced further apart than 98 metres. The length of posts above ground shall be such that the correct clearance between the lowest wire and the ground can be obtained.

Usually 120 - 150mm timber posts are used as corner or straining posts as indicated in sketches below

Cross member or stay is a typical 75mm treated timber post. Straining cross wire is normally 1.8mm mild steel galvanized. Place posts **98m** apart or where the ground contour changes or the fence changes direction.

Intermediate Posts (Droppers)

Space according to expected pressure on fence at maximum of 10m apart. In uneven terrain posts are not necessarily placed at equal spacing but rather at the centre of rises and depressions. This will ensure that bottom strand of wire remains always near the ground.

Straining

A clamp bar is required for the erection/installation of mesh wire. The Contractor must indicate that they possess such a clamp bar or could access one for the duration of contract.

Remove the first 2 or 3 vertical wires from the end of the fence freeing enough wire to go around the straining post and leaving enough to tie the fence with (Fig 1)

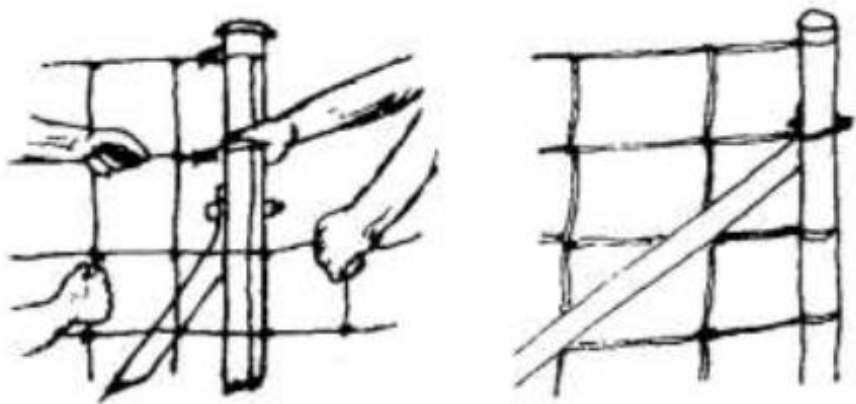

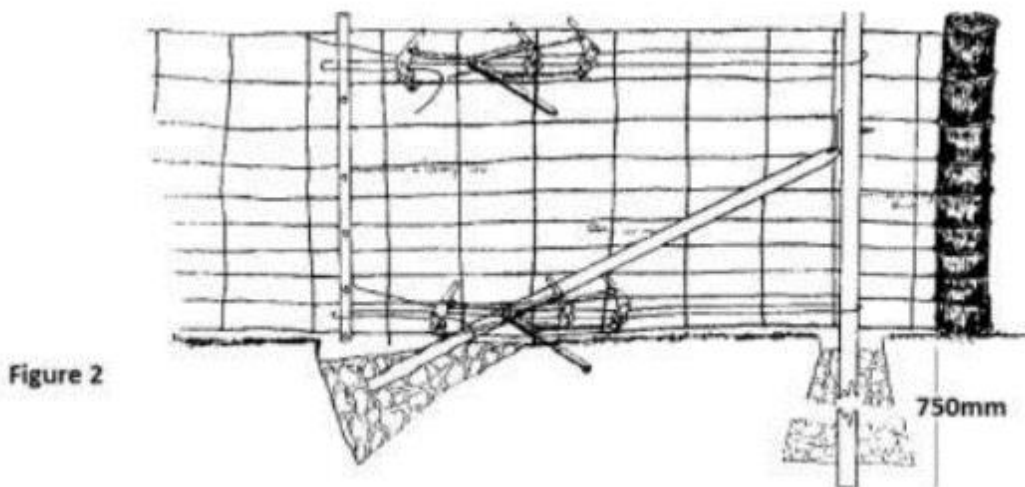

Figure 1

Vertical wires should be parallel with the straining post. Beginning from the bottom of the straining post, tie each of the line wires evenly around the post to ensure that fence will pull up squarely and neatly. Place the clamp bar 1.5m from the second straining post ensuring that all line wires are securely clamped (Fig 3).

Attach two three strainers between clamp bar and second straining post (Fig 2+4). Strain entire fence until tension curves in line wires start pulling straight. Now fasten fence to the second straining post. Remove clamp bar and wire strainers. Tie the top bottom and every 2nd line wire to standards (Fig 5)

How to attach the clamp bar.
